

1. Install the certificate & private key that was send to you by email:
 - Start with the User Interface (UI) machine (or [course VM](#)) installation in your \$HOME/.globus directory
 - Set the correct permissions for the two files: *usercert.pem* & *userkey.pem*
 - Apply openssl commands to inspect your certificate details

2.

Convert your certificate & private key in pks#12 format and import this in your browser:

- Note that you may have to copy this file to a directory accessible from your browser
- You will have to type *three* passphrases:
 - One to decrypt your key
 - One to re-encrypt your pks#12 file (export). **Do not leave this passphrase empty!**
 - One to make sure you did not make any typing mistakes by typing the same export password
- Ensure that you set the permissions for the .p12 file, e.g. *chmod 0600 browsercert.p12*

3.

Register for the **tutor** VO here: <https://voms.grid.sara.nl:8443/vomses/>

- Note that you must have the certificate installed in your browser to get access to this page
- Select the *tutor VO*
- Fill in your personal details (name, email, etc.), then read and accept the AUP
